

“Red Head” TW-300 Series Tank and Tote Washer

Simplicity in Application – Efficiency in Washing.

The TW-300 Series of Tank and Tote washers clean tote tanks and open-top portable tanks from 6” to 80” in diameter. The TW-300 Series washes with a high-volume pressure spray. The spray-wash pattern insures all interior vessel surfaces are washed. The TW-300 Series Washers can additionally clean 55-gallon open-top drums with the economical Drum Washer option. Operation is managed by a PLC with operator interface. The PLC insures that washing only takes place when all safety devices are satisfied. The operator moves the vessel to the washer, lowers the gasketed lid into position, and pushes the “Start” button.

The washer consists of a pressure wash pump, a wash solution take-away pump, and a clean-wash medium rinse pump. The wash solution is recirculated to minimize the clean-wash solution. When the wash cycle is complete, the clean rinse solution is activated; volume required is typically < 3 gallons. Typical wash cycle times are 3-5 minutes per tank. The washer nozzle is driven by the wash solution flow. The nozzle is geared to prevent free-wheel spinning. The spray pattern is directed for maximum impact and complete coverage.

The TW-300 Series Washers are easy to install. Locate the washer, bring power, air, and wash solution plumbing to the TW-300 and it’s ready to run.

Features

- Eliminates vapor exposure to your employees
- Cleans totes and tanks efficiently
- Saves time versus manual cleaning
- Pressure washing cleans “all” interior surfaces
- Automatic wash cycle eliminates rework
- Wash nozzle insures complete vessel coverage

Dimensions: 99” L x 69” W x 137” H
Approx. Wt.: 3,000 lbs.
